EVOLVEO / DATA ACT

Product data information

EVOLVEO StrongVision PRO WiFi II, trail / security camera with WiFi and 10 000 mAh battery

Product	SGV CAM-WiFi-II | EAN 8595683206044
Issued by	Abacus Electric, s.r.o. | Company ID 45022828 Planá 2, 370 01 Planá, Czech Republic
Contact	helpdesk@evolveo.com
Issue	27. 10. 2026 | updated 29. 10. 2026 | version 2.0

1. Connection and user interface

Direct local Wi-Fi connection to a phone. EVOLVEO WiFi.

2. Types of data and how they arise

PIR motion detection and capture settings. Photos and videos are content data; downloading them must not be confused with exporting all trail camera operational data. Generated on motion detection, according to the capture mode, and when the user changes settings.

3. Storage and retention

Recordings are stored on a memory card. The app provides local access.

Data access and management

4. Data access and retrieval

Connect the phone to the trail camera's local Wi-Fi according to the instructions and open its app. View and download recordings and manage settings there. Bluetooth activates the Wi-Fi access point. The phone-to-camera connection requires no internet. Original files are directly accessible to the user on the memory card: switch the device off, remove the card and copy the files using a compatible reader. This access requires neither cloud nor internet and applies to files still stored that have not been deleted or overwritten.

5. Deleting data and the account

Manage local recordings through the memory card / gallery menu according to the model instructions. Erasing the card does not remove copies already sent or downloaded.

6. Data formats and availability

Photos and video recordings are separate from operational data. The data schema and a separate operational data export are not specified in the product description. Transmission and data freshness depend on the device being powered on and on connection and service availability. Local files are accessible through supported storage. This sheet does not promise continuous cloud connectivity, a specific response time or a universal export of all internal data.

7. Data requests

Requests and technical support: helpdesk@evolveo.com. State the model, device identifier and scope of the requested data. Do not send the account password. The applicant's authority must be verified before any account action. A data request is not in itself consent to account deletion. Technical administration limitations do not waive the user's statutory rights.

Services and responsibilities

8. Roles of Abacus and the provider

Abacus Electric, s.r.o. issues the product information and provides customer support. Data access is provided through the interface stated in this sheet. A cloud account deletion request does not apply to local operation without a cloud account.

9. Use of data

For local functions without cloud connectivity, Abacus maintains no customer archive of these data. If the product is connected to a parent system, retention and access to its history depend on that system's functions.

10. Transfer to a third party

A request for access to available data or its transfer to a third party of your choice can be sent to helpdesk@evolveo.com. Processing respects the applicant's authority and technical access to the data. If an external platform manages the data, the request is handled through its interface or with its provider. You can transfer already downloaded files to a third party yourself.

11. Using and ending the service

Local product functions are used according to the instructions. Connected services are governed by the terms of the specific app. Removing a device, deleting an account and cancelling a paid subscription are separate actions. Uninstalling the app alone neither cancels a subscription nor deletes the cloud account.

12. User rights

The user may exercise rights to access and share available data under Regulation (EU) 2023/2854 and lodge a complaint with the competent authority designated under Article 37. Personal data rights remain unaffected. Any trade secret protection must be assessed for the specific data; this sheet does not classify all data as trade secrets or introduce a general prohibition on sharing.

Data volume and sources

13. Operational data volume calculations

Calculation basis: 1 B = 8 bits; 1 kB = 1 000 B; 1 MB = 1 000 000 B. Volume = number of records × record size. The encoding and frequency below are calculation inputs, not confirmation of the internal format or actual device reporting frequency. A binary flag can be expressed with one bit; storing it separately in one byte uses 1 B. At 100 events per day, this is 100 B/day and 3 000 B over 30 days for the one-byte flags alone. Time, identification, field names, protocol, security and retransmissions increase the total volume. The calculation is neither an export file size nor mobile data plan consumption. Image content: originals are on the memory card. Their exact volume is the sum of file sizes shown in a card reader. For a set of N photos and M videos: volume = sum of sizes of N photos + sum of sizes of M videos. Size depends on resolution, video length and compression. EVOLVEO CAM cloud parameters do not apply to this app.

14. Scope of information

Information about Abacus practices is based on the company's confirmation. Product functions are based on its documentation. External apps are subject to the provider's terms for the specific account, region and plan. The calculation scenarios do not replace a confirmed product data schema. This document is neither an EU declaration of conformity nor a Data Act compliance certificate.
